

Paws Haven Animal Rescue Website Project

Student Information

Student Name: Katleho Magano

Student Number: ST10488462

Module: WEDE5020 – Web Development Introduction

Institution: The Independent Institute of Education (The IIE)

Assignment: Portfolio of Evidence (POE) – Part 2

Project Overview

This repository contains Parts 1 and 2 of a three-part Portfolio of Evidence for the WEDE5020 module. The project is a website for Paws Haven Animal Rescue, a fictional animal rescue organization that shelters, medically treats, and rehomes rescued dogs. Part 1 built the foundation of the website using semantic HTML structure, content, and navigation. Part 2 adds CSS styling and responsive design, giving the site a cohesive visual identity and ensuring it works well on desktop, tablet, and mobile screens. Part 3 (JavaScript interactivity) is still to follow.

Part 1 Feedback

Part 1 was marked and returned with a result of 98%, with not much feedback. As there were no multiple mistakes to point out, Part 2 proceeded directly with the planned CSS styling and responsive design work.

Website Objectives

- Raise awareness of Paws Haven Animal Rescue and the work it does
- Showcase dogs currently available for adoption
- Make it easy for visitors to volunteer, sponsor a dog, or make an enquiry
- Provide clear contact details and shelter locations
- Build a simple, accessible, and easy-to-navigate site structure
- Present the site with a cohesive, professional visual identity that works across desktop, tablet, and mobile devices

Functionality

- Semantic HTML structure using header, nav, main, footer on every page
- Consistent navigation menu across all 5 pages
- Homepage with hero section and an overview of the organization's work
- About Us page detailing the organization's story, mission, vision, and team
- Adoption page listing available dogs with photos and adoption process steps
- Volunteer / Sponsor enquiry form
- Contact page with two embedded Google Maps locations and a contact form
- SEO-friendly meta tags (description and keywords) on every page
- Code comments throughout for clarity and maintainability

- External stylesheet (style.css) applying consistent colors, typography, and spacing across every page
- Flexbox and CSS Grid layout for the navigation menu, dog adoption cards, and multi-column content sections
- Interactive hover, focus, and active states on links, buttons, and form fields
- Fully responsive design with dedicated breakpoints for tablet and mobile screens

Milestones

Milestones	Status
Organisation selection and proposals	Completed
Content research and sourcing	Completed
Sitemap design	Completed
File and folder structure setup	Completed
HTML pages built (5 pages)	Completed
Images sourced and added	Completed
GitHub repository setup	Completed
Part 1 submission	Completed
Part 1 feedback reviewed (98%, no corrections needed)	Completed
External stylesheet created and linked to all pages	Completed
Base styles, typography, and color scheme applied	Completed
Layout structure (Flexbox/Grid) implemented	Completed
Interactive pseudo-classes added	Completed
Responsive breakpoints for tablet and mobile implemented	Completed

Part 2 submission	Completed
Part 3 – JavaScript interactivity	Upcoming

Part 1 Details

Part 1 covers the foundation of the website: - Two website project proposals (Paws Haven Animal Rescue and Sweet Crumb Bakery), with Paws Haven Animal Rescue selected as the chosen organisation - Research and sourcing of content used to inform the website's copy and structure - A sitemap outlining the site's page hierarchy - A file/folder structure separating css, js, and images from the HTML files - Five HTML pages: index.html, about.html, services.html, enquiry.html, contact.html

Part 2 Details

Part 2 covers the visual design and responsiveness of the website: - A single external stylesheet (css/style.css) linked to all five HTML pages - A CSS reset and a base style layer using CSS custom properties (variables) for colors, spacing, and typography - Typography styling with a consistent font scale across headings and body text - Layout structure built with Flexbox (navigation, dog adoption cards) and CSS Grid (homepage "What We Do" section, About Us Mission/Vision section) - Decorative and colour styling using a warm, cohesive palette suited to an animal rescue organisation - Interactive pseudo-classes (:hover, :focus, :active, :focus-visible) on navigation links, buttons, and form fields - Responsive design with two breakpoints (768px for tablet, 480px for mobile), adjusting layout, typography, navigation, and images at each breakpoint - A separate Part 2 documentation report explaining how each rubric requirement was met

Changelog

Date	Change
03 August 2026	Initial repository setup
04 August 2026	Added proposals and sitemap
05 August 2026	Created folder structure (css, js, images)
06 August 2026	Built all 5 HTML pages with navigation
07 August 2026	Added images to images folder
07 August 2026	Final Part 1 review and submission
15 September 2026	Reviewed Part 1 feedback (98%, no corrections required)
15 September 2026	Created external stylesheet (style.css) and linked it to all 5 HTML pages
15 September 2026	Implemented CSS reset and base styles (colour variables, spacing scale)
16 September 2026	Applied typography styles and a consistent font scale
16 September 2026	Built layout structure using Flexbox and CSS Grid

16 September 2026	Applied decorative and colour styling across all pages
16 September 2026	Implemented responsive breakpoints for tablet and mobile
